### DETAILED ACTION

This Office action is in response to the election filed June 23, 2003.

1. Claims 2,3,5,6,11,13,15-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 8.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 4, 7-10, 12 and 14 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by EP-949540 (FUJIMAKI et al), AOAI et al '711, or AOAI et al '582.

The claimed invention is drawn to a photosensitive lithographic printing plate comprising: a support; and a photosensitive layer, wherein the photosensitive layer comprises polyurethane resin binder comprising an aliphatic cyclic structure which has a carboxyl group as a substituent directly or indirectly attached to the structure.

FUJIMAKI et al anticipates the claimed invention at Example 5, on page 156, Table 5.

The Example discloses a polyurethane

ane made from an alicyclic group containing diisocyanate and a carboxylic group containing diol compound as recited in claim 1. The photosensitive composition further contains the pentaerythritol tetraacrylate monomer and a photoinitiator.

Art Unit: 1752

AOAI et al '582 anticipates the invention at Example (E)-4 (Ex. 14) wherein a polyurethane made from the precursors found in Table I of column 21 and 22 are used, which anticipate the recited photosensitive lithographic printing plate.

AOAI et al '711 anticipates the claimed invention at lithographic printing plate III of Table 2 found in column 20, lines 15-30. The polyurethane comprises an alicyclic diisocyanate and a carboxyl group containing diol, thus meeting the claimed invention as recited.
